

User Story:

As a user, I want to be able to login to the system, in order to access my individual account

TASK	Test Case
Have a presentable Login and sign up page	The login and sign page appears when the app opens and has all the information on it.
Have a password authentication by adding regex	Once the regex is not correct with the string imputed for the password an error should pop up and the user.
login button	Have a good looking login button that can be clickable once all the required is filled.
sign up button that goes to the sign up page	sign up page appears when the sign up button is clicked
with sign up have more information like what clothes u want etc	Allowed to input the additional information and its saved to the user's profile
study and get more information about react native to do the login page	Have a better understanding of react native inorder to get started and help out with login page implementation
once login be able to go to a dummy homescreen	The dummy home screen appears after successful login
set up the whole environment where the login button will be implemented	Have the environment setup and be able to run it
connect react native to firebase for backend	Be able to connected and store something in the database
