

## Chic Closet Test Case Lab 3

TASK	TESTCASE
Add buttons to the Swipe page (X will have same features as left swipe and Heart will have the same features as right swipe)	When the user clicks X the product will move to the end of the stack. When the user clicks on the Heart the product will be added to the favorites page.
Finish off Swipe Page	The user will be able to have a clear image of the product card and interact with the buttons.
Add 'add to cart' button to favorites page	When the user views the favorites page they will see a button that they can interact with to move the item into their cart.
Make sure the Login system properly works to verify the user has an account.	When the user interacts with the login screen, they will be able to type in their email and password. If the user doesn't have an account they will be prompted to sign up for an account.
be able store data of the api	When the developers are working with the api they will be able to know what data we have and how to access it
Implement new api to all screens	When a user opens the app products from the new api should appear and be interactable
implement api to load clothes into the catalog	When user presses on catalog, the catalog should display the proper clothes from the api
Add functionality to the catalog's filtering(men's shirt, women's jeans, etc)	When the user clicks one of the buttons on the catalog(men,womens,shirts,pants,etc), it will display clothes adhering to the respective filter.
Populate catalog with a full list of interactable clothes	When the user presses on a picture of clothes on the catalog, a pop should occur displaying information abt the product and an option to add it to the cart
be able to delete it from the database once the user remove it from the database	Once the user deletes an item from the favorite it should also not be in the database.
save the items in the favorites to the database for that use	Database should have the favorites of the user saved so they can still be seen even if they leave the app.

add a checkout button and ask card information	There will be a checkout button for the user if something is in the cart and they can put their card info
add a shopping cart button	Every page will be able to see the shopping cart button and use can click on it to see if something is in the cart or not.
Obtain images from asos site	When the user views the items they will be able to see a visual/image of the product.
